

- PURE BRONZE - 90% COPPER AND 10% TIN
- TRADITIONAL HANDCRAFTED DESIGNS
- WILL NEVER RUST • LASTS A LIFETIME
- CUSTOM FABRICATION AND DESIGN

Coastal Bronze was created to provide a reliable and cost effective source for all solid bronze hardware in rustic old world designs for coastal areas and rustic settings. Coastal Bronze products fill a gap that has existed for years in hardware lines for these types of products.

Introduction

In 2006, we recognized a niche in the hardware industry where the environmental elements weighed heavily on the man made structures within it. Necessity lead to discovery, and discovery lead to the creation of **Coastal Bronze**.

We offer a full line of traditional pure bronze hardware solutions for gates, doors, windows, new construction and remodels. We provide a unique solution for any structure that requires a life long product to combat the harsh outdoor elements while maintaining a classic and charming design.

- Cost Effective and Reliable Old World Designs
- Custom Design and Fabrication for Unique and Challenging Hardware Scenarios
- A Vision Driven by Our Partners as well as the End Users of Our Products
- Dedication to Outstanding Customer Service, Striving to Exceed Expectations

Commitment To The Environment

At Coastal Bronze, our recycled bronze products represent our commitment to the environment.

We care about the planet at Coastal Bronze. With future generations in mind, we carefully choose Manufacturing Materials with the intent of a greater contribution to the health of the environment. Our hardware is manufactured from recycled copper as well as tin salvaged from various sources for a purely recycled process. While our hardware is 100% recycled material, our sub-assemblies and screws are non-recycled.

Specifications and Procedures

Due to the nature of many of the products, in the range, sizes may vary to a small degree. Coastal Bronze reserves the right to discontinue or change any product, design, function, finish or price without prior notice.

Strength of Bronze

Most bronze used in casting hardware today is composed of 85% copper and the rest in various other metals. The strength of steel is two to three times stronger than copper. This is important to note when using bronze to support heavy doors or gates.

A Note about Finishes

Bronze ages gracefully and may change in appearance due to varying environmental conditions. Bronze patina finishes will develop a wear highlight with frequency of use. When bronze is exposed to air it will tarnish quickly and turn brown. Bronze exposed to exterior elements and conditions will turn green. This discoloration is referred to as patina. This patina process starts immediately upon installation. None of these conditions are considered defects, but part of the natural beauty of aged bronze.

We strive to match finishes within a given order, but parts ordered at a later date may not match the original pieces. They should however, age to match the original pieces.
