Drawer Slide Terms

- **Soft Close** The slide soft closes on its own for the last 2~3" of movement.
- **Slide Length** The longest dimension of a fully closed slide. This dimension cannot exceed the depth of the cabinet into which it is installed.
- **Travel** The distance that a slide moves from the closed to a fully open position.
- **¾ Extension** The slide extends approximately ¾ of its length from the front edge of the cabinet front.
This is the normal travel of 2 member slides.
- **Full Extension** The full withdrawal of a drawer from the case. This is the normal travel of 3 member slides.
- **Positive Stop** Drawer stops at extended/open position, but does not lock or detent.
- **Positive Lock** Drawer is firmly held in the extended/out position. Drawer is released by depressing a lever and pushing the drawer inward.
The drawer can also be disconnected by depressing the lever and pulling the drawer outward.
- **Friction Brake Stop** Drawer stops at extended/open position by the resistance of the ball retainer.
Usually achieved by deforming the slide races to achieve an interference fit.
- **Hold-in Detent** Drawer is firmly held in the fully closed position. Drawer is released by pulling the drawer outward.
This feature is also known as a Positive Catch.
- **Front Disconnect** Drawer member can be disconnected by actuating the disconnect lever.
- **Quick Disconnect** A drawer bracket attaches to the drawer and engages the drawer member of the slide.
The drawer can be disconnected by actuating the drawer rail lock, and pulling it outward.

MULTI-ROLLER LINEAR SLIDE SYSTEM

MLG

- Allows for smooth movement with the unique mechanism called "multi-roller".
- Please use with stoppers.
- The finish of the mounting holes and the rail edge is plain.
- Ideal for Medical equipment, food machine, amusement machine, analytical instruments applications

Compact

Vertical

Radial

Thrust

[Combination Drawings]

The guide rail, guide block, and mounting plate are used.

[The Unique Mechanism]

The multi-roller mechanism makes it possible to have smooth movements even with loads applied in radial or thrust directions.

[Rated Load Reference Values] The rated load refers to the load limit.

- Max. load = Static rated load × Static safety coefficient
- Operating load = Max. load × Dynamic safety coefficient

- Max. moment = Static rated moment × Static safety coefficient
- Operating moment = Max. moment × Static safety coefficient

Use Conditions	Static Safety Coefficient	Dynamic Safety Coefficient
Low movement frequency with gentle movement	0.4~0.5	0.9~1.0
High movement frequency with smooth movement	0.3~0.4	0.6~0.8
High movement frequency with vibration or impact	0.2~0.3	0.3~0.5
