

Increase The Functionality and Performance of Your SawStop Table Saw

Make your SawStop cabinet saw work harder for you by adding these two accessories: the Large Sliding Table and the Floating Overarm Dust Collection attachment.

The **Large Sliding Table** (TSA-SA70) is SawStop's largest sliding crosscut table, and it's made for the industrial workshop. The heavy-duty Large Sliding Table features an impressive 70" of crosscut capacity and 350-lb weight rating, allowing you to cut multiple full sheets of plywood, particleboard, or MDF at a time. The rigid steel frame and 14 sealed bearings ensure a reliable, smooth glide, and maximum adjustability helps you install it in both traditional and Euro-style configurations.

In addition, installing a **Floating Overarm Dust Collection** attachment (TSG-FDC) to your saw provides you the peace of mind of an effective blade guard coupled with the efficient collection of sawdust above the blade, resulting in a safer, cleaner workspace for you and your employees. The pivoting Floating Overarm Dust Collection attachment uses a 3" metal pipe inside a 4" pipe for rigidity and adjustability, extending from 35-3/4" to 68". You can also adjust the guard up as needed for more clearance above the blade.

Protect your business and employees with these valuable SawStop accessories--available for purchase at Charles McMurray Co. Visit McMurray.com to order or find a location near you.
